# AI-Powered Dash Camera Solution

## Powering best-in-class visibility into fleet safety

**Fleet Complete** is advancing driver and fleet safety. FC Vision's simple-to-use forward and dual-facing cameras are enhanced with artificial intelligence (AI) to detect unsafe driving behaviors, such as speeding, tailgating, rolling stops, harsh braking and distracted or fatigued driving. Empower your drivers to adopt **safer driving habits** by self-correcting risky behaviors with audible in-vehicle alerts. Fleet managers can track driver progress and take immediate action to improve driver and vehicle safety and productivity.

### 1 Gamify your driver safety program

Recognize and reward your safest drivers and motivate others to improve their driving habits.

### 2 Powering best-in-class visibility into fleet safety

The Driver Monitoring System (DMS) identifies and warns against dangerous events like apparent texting, or drowsiness while driving.
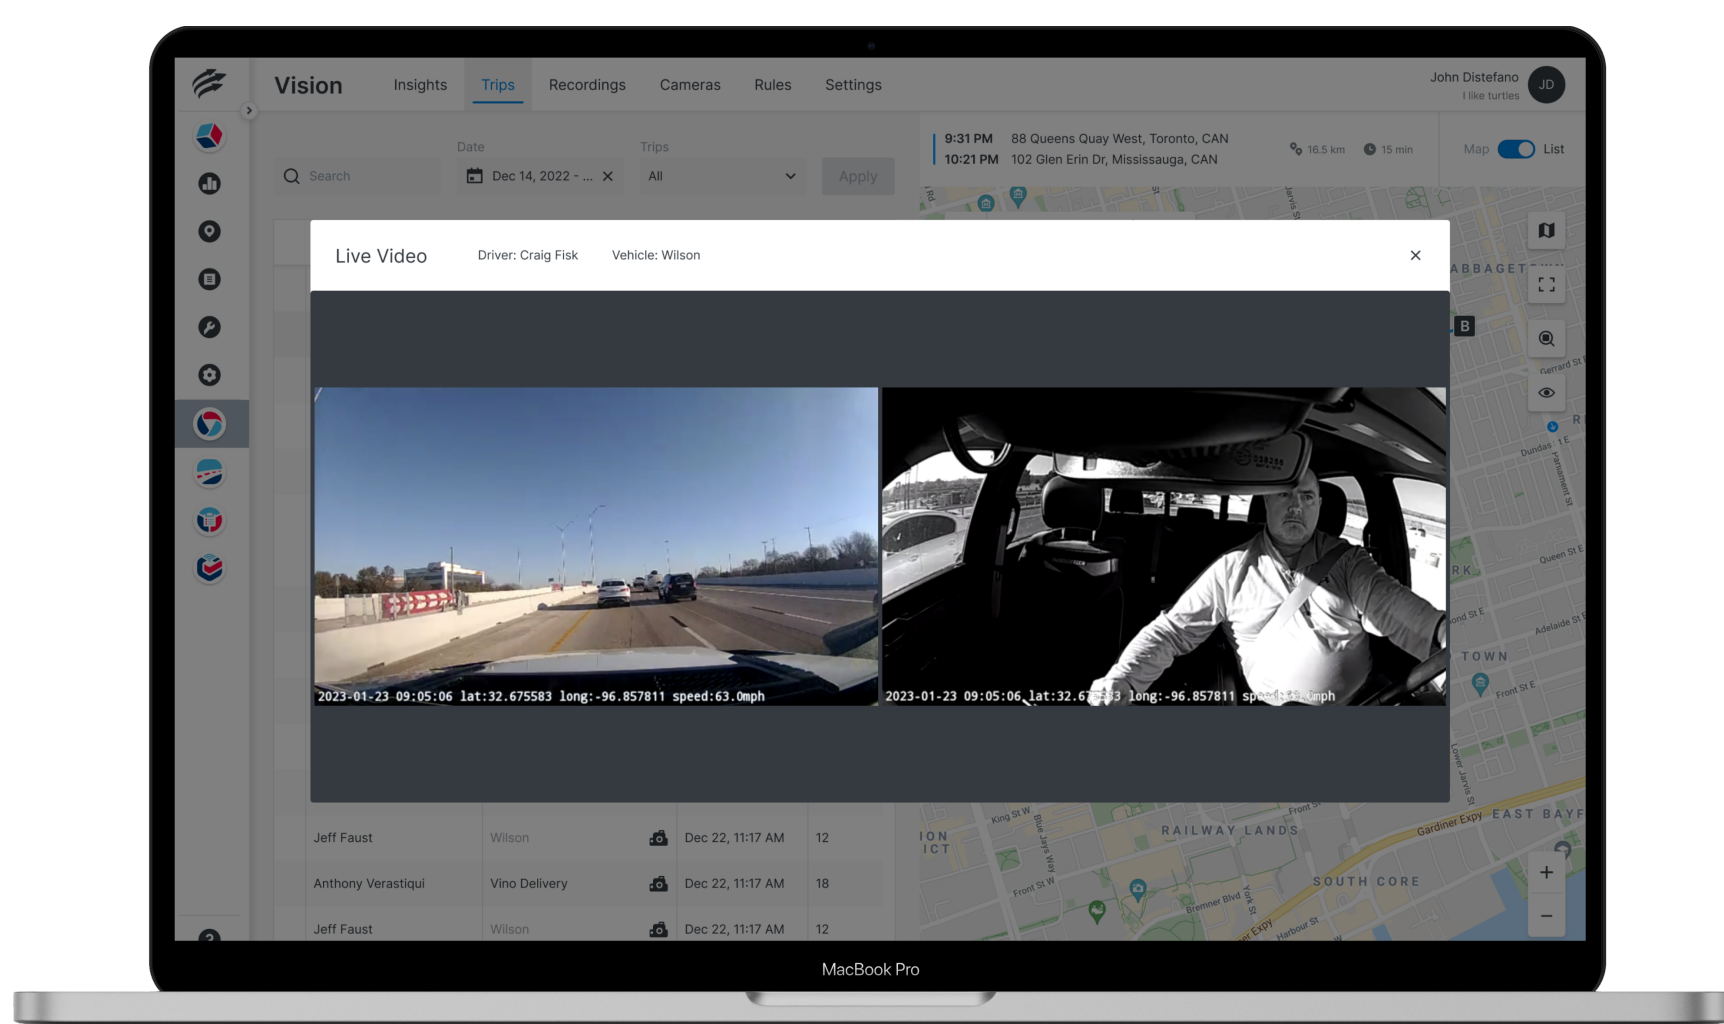

### 3 Enrich and personalize driver coaching

Provide personalized feedback with automated in-vehicle coaching, driver scoring and live streaming. *

### 4 Protect drivers from legal liability

Don't let inaccurate court claims take your drivers off the road or drive up your insurance costs.

**Make your fleet safer and save money with FC Vision dash cameras.**

**Fleet**Complete

# Optimize fleet productivity and mitigate avoidable risks

## How It Works

Get online and connected in minutes with plug-and-play installation. Feel protected with near real-time visibility to your drivers' activities and experiences on the road or highlight parts of the journey for later review with on- demand videos.

Help prevent collisions or violations with audible in-vehicle alerts for driver coaching and access data driven fleet and driver safety reports to proactively monitor progress. Collision detection notifies fleet administrators immediately so they can notify first responders and send help.

## Top Features

### Simple installation
Plug-and-play install with forward and dual-facing cameras

### Advanced privacy and security
End-to-end encryption to protect your fleet assets and drivers

### Remotely access live streaming video*
Coach drivers in real-time while they are in the road.

### AI-powered video cameras
FC Vision's machine learning and computer vision driver assistance and monitoring technology identifies high-risk driving behaviors. It detects external factors that might put the driver at risk and alerts the driver to potential threats.

### 180° Camera views
Access multiple views to get the complete picture

### Capture critical events
An emergency recording button for drivers to capture video of threats on the road ahead.

### Integration provides deeper insights
FC Vision can be accessed within the FC Hub administrative interface. FC Hub data integration provides context for informed decision-making

### Intuitive desktop and mobile companion applications
Desktop admin view enables fleet admins to supervise drivers remotely. Mobile app enables drivers to evaluate their driving habits.
